

TLW WindSense

Precisely measuring wind sensors

Avoid yield losses!

Even a few degrees of deviation in the wind measurement and tracking of a wind turbine can in many cases reduce the yield of your turbine by several percent!

Therefore, check the wind sensor technology of your system today with **TLW WindSense** !

TLW WindSense briefly summarised:

- Alignment measurement of your plant by attachment of a temporary measuring system
- Only supply voltage required, Internet and server connection through **TLW**
- High-precision measurement of wind direction using ultrasonic sensor technology
- Checking the wind alignment of the turbine and the correct northing
- Comparison with SCADA or plant data of the customer
- Detailed analysis and measurement report for documentation
- Installation and dismantling by **TLW**

We are also happy to carry out the wind measurement continuously in predefined time periods in order to notice a change at an early stage.
